

RELIANCE T.U.P XII · ELIMINATION ROUND

JioMausam

*We don't build sensors.
We become the sensor.*

A live, street-level weather map from Jio's own network, and insurance that pays workers automatically when extreme weather stops their work.

OUR WORKING PROTOTYPE

Same storm. Our network vs a radar.

JioMausam: rain from 500 network links

Each line is one tower-to-tower link, coloured by the rain it measured. The field between links is interpolated.

**Reference: national weather radar**

What a ₹-crore Doppler radar saw over the same area at the same moment.

500

real tower-to-tower microwave links, 1-minute signal data

0

radars, weather stations or new hardware on our side

[Open the live prototype to replay the storm](#)

THE PROOF

Tested on days it had never seen.

0.95

network-wide match with radar,
hour by hour

0.88

typical single link on its own

91%

of rainy days caught, 4.6% false
alarms

Indian weather tells us where to start.

Start where the triggers are.

Mumbai has about 12 heavy-rain days a year, so rain and riders come first. Nagpur’s and Ahmedabad’s danger is heat: that’s phase two.

Mumbai rain · 11.9 heavy days a year

Phase 1

Nagpur heat · 9.7 days $\geq 45^{\circ}\text{C}$

Phase 2

Ahmedabad heat · 5.4 days $\geq 45^{\circ}\text{C}$

Phase 2

THE PRODUCT

What a worker actually sees.

1 Covered from their recharge. The ring fills as rain builds.

2 The network crosses the trigger. ₹300 lands in JioPay.

3 City prices, set from 25 years of IMD records.

THE BUSINESS

Riders first. Then everyone.

₹12.5 Cr

of premiums a year from one delivery app covering 50,000 Mumbai riders on Kavach Plus (₹208 a rider a month)

Premiums aren't Jio's revenue: a licensed insurer holds them. Jio keeps 15-25% as distribution and data fees, about ₹1.9-3.1 Cr here, and carries no insurance risk.

Kavach Plus • first

Delivery apps buy it for riders: ₹208 a rider a month in Mumbai, any work-stopping day, up to 5 a year.

Kavach Basic • phase 3

Individuals add it at recharge for ₹29-52 a month by city. 1% of Jio's users = ₹174 Cr of premiums; Jio's fees ₹26-44 Cr.

Data + customer zero

Insurers and state disaster agencies license the map: revenue that is Jio's own. JioMart, New Energy and Jio use it first.

WHY RELIANCE, AND OUR ASK

Only Reliance holds every layer.

Sense Jio network, lakhs of sites

Reach 500M+ users who recharge

Pay JioPay and JioFinance

Insure Jio Financial Services partners

Use JioMart, New Energy, Jio

The ask: a 90-day coverage audit

Mumbai monsoon: rain, riders, one delivery app. Payouts in shadow mode, so no money moves yet.

- Jio link logs for Mumbai
- One JFS insurance partner and one delivery app
- A five-person team. No new hardware.

Success: $r \geq 0.8$ against IMD gauges, 80% of heavy-rain events caught, money in wallets within 6 hours.

THE ROADMAP

Four phases. Rain first.

1

MONTHS 0-3

Coverage audit + shadow pilot

Mumbai: rain, riders, one delivery app. Payouts simulated; measure links and accuracy against IMD.

2

MONTHS 4-12

Sandbox + heat

Real payouts for one app's riders in IRDAI's sandbox. Heat module in Nagpur and Ahmedabad.

3

YEAR 2

Kavach Basic

At every recharge, priced city by city: ₹29-52 a month.

4

YEAR 3

National map

Every district. Data API for insurers, states and Reliance.

India won't adapt to climate change by building more.

It will adapt by listening to what it already has.
